- (2) Use compressed air to clean the cleaning fluid attached to the surface of the valve assembly after cleaning, and clean it up to the standard of use, as below
- (3) When installing the valve stem, make sure that the valve stem and the bonnet must ensure that the valve stem can move smoothly in it. as below

- (4) When installing the valve stem, make sure that the valve stem and the bonnet must ensure that the valve stem can move smoothly in it. as below

If the injector steel ball and the ball seat are not installed in accordance with the standard, it may cause serious damage to the injector valve assembly

## 2.2.F00VC01359 Injector Valve Assembly Replacement Conditions

### (1) Valve Cap

Under the microscope, magnify 20 times to check that the oil inlet hole of the valve cap and the oil return hole of the bonnet are not worn, grooved, scratched, damaged, rusted or dented.

		
Valve cap inlet hole location	Valve cap return hole location	The oil inlet and oil return holes of the valve cap are free of wear, grooves, scratches, damage, rust, dents, and do not need to be replaced
		
The Valve cap oil hole is recessed and needs to be replaced	The valve cap oil hole is worn and needs to be replaced	The valve cap oil hole is punched and needs to be replaced

⚠ The wear of the top oil return hole causes the oil return to be too large and the leaking injector cannot inject oil

⚠ The side inlet hole is blocked causing the injector to establish the pressure chamber and the injector to function normally

⚠ **Wear of the cap cavity can cause the injector to work properly when the injector is badly delayed.**

## (2) Valve Rod

Microscope amplification 20 times, check the valve rod for wear, not smooth surface color, rust

		
The valve stem is worn out and needs to be replaced	The valve stem surface is not smooth and colorless, and it needs to be replaced	The valve stem is rusty and needs to be replaced

⚠ **The excessive clearance between the stem wear and the housing and between the cap causes an injector delay**

⚠ **The valve stem lag will cause the injector to start the solenoid to start, and the oil needle can not return quickly after the nozzle is opened**

⚠ **Check the injector components before replacing the injector valve assembly according following the injector service manual to avoid further damage to the injector valve assembly.**

**4.F00VC01359 Valve Assembly's Storage Standard****(1) Choose a suitable storage place**

The warehouse and cargo yard where the fuel injector is stored should be kept clean and dry, and away from the factory buildings that generate harmful gases and dust; do not mix with acids, alkalis, salts and other substances; the storage place should have a good drainage system; the cargo yard should be flattened with gravel or furnace ash etc. to enhance the water permeability of the surface layer to keep the reservoir area dry.

**(2) Strict requirements of warehousing**

Strict inspections should be carried out when the fuel injectors are put into storage, the surface cleaning work should be done well to remove water traces, oil stains, ash and other dirt, remove the rust and do anti-rust treatment in time. Packaged injectors must be protected from damage.

**(3) Keep the warehouse dry and preventing moisture**

The relative humidity is usually below 70% for the fuel injectors placed in the room, and the corrosion of the fuel injectors is significantly reduced.

Injectors must be stored in the warehouse, and they are forbidden to store in the same warehouse with commodities with high water content.

**(4) Stack Properly**

After the injector is exposed to rain, the corrosion rate will increase significantly. The purpose of sealing is to isolate the injector from rainwater and humid air, so the warehouse window should be checked

in time to avoid rainwater entering the warehouse

If the fuel injector package is damaged, it should be repaired or replaced; when the package is damp, the packaging material should be dried; if the original anti-corrosion and oil applied at the factory is found to be damaged or dried up, it should be cleaned and re-applied oil in time.

It is forbidden to leave the injector exposed in the air for a long time.
