## RF7J 13 H501 Injector Orifice Plate 32# Technical File

### 1. RF7J 13 H501 Injector Orifice Plate 32# Introduction

#### 1.1. RF7J 13 H501 Injector Orifice Plate 32# Basic Information

Title	China made new RF7J 13 H501 fuel Injector Orifice Plate's 32#
SKU1	G1Z17000000032
SKU2	F1000000D002032
SKU3	G1N12950403200

#### 1.2. RF7J 13 H501 Injector Orifice Plate 32# Common Part Number

##### (1) RF7J 13 H501 Injector Orifice Plate 32# Application to Car Model Information

Injector Part Number	ISUZU Car Model	ISUZU Car Model	OE Number	OE Number
RF7J 13 H501	MAZDA MAZDA5 RF-DI			

##### (2) RF7J 13 H501 Injector Orifice Plate 32# Part Number Common Writing

32#, 32, 295040-6900, 2950406900, 2950406900

#### 1.3. RF7J 13 H501 Injector Orifice Plate 32# Specifications and Dimensions

Injector Orifice Plate's Size: 2cm\*2 cm \*1 cm

Injector Orifice Plate's Box Size: 7cm \*7 cm \*2 cm

Injector Orifice Plate's Package Size: 8 cm \* 8cm

Injector Orifice Plate's Net Weight: 0.015kg

Injector Orifice Plate's Gross Weight: 0.03kg

Injector Orifice Plate's Quality: China Made Brand New

MOQ: 4 Pieces

#### 1.4. RF7J 13 H501 Injector Orifice Plate 32# Quality Control

##### (1) RF7J 13 H501 Injector Orifice Plate 32# Testing

All RF7J 13 H501 injector orifice plate 32# parts are subjected to A-hole flow test, Z-hole flow test, precision test, high temperature test, low temperature test, pressure test, leakage test, durability test, and various working condition tests.

##### (2) RF7J 13 H501 Injector Orifice Plate 32# Inspection

The factory inspection of RF7J 13 H501 injector orifice plate 32# is undergone three inspections - full inspection, random inspection, and batch inspection. Different brands of test benches are used to test RF7J 13 H501 injector orifice plate 32# for a total of no less than three times for factory inspection, and RF7J 13 H501 injector orifice plate 32# installation testing environment are progressed in dust-free workshop.

#### 1.5. RF7J 13 H501 Injector Orifice Plate 32# Customized Service

##### (1) RF7J 13 H501 Injector Orifice Plate 32# Customized Service Range:

Meet the OEM manufacturers customized demands of orifice plate's lettering, orifice plate's thickness, orifice plate's packing box, orifice plate's anti-rust bag and label etc.,

## (2) RF7J 13 H501 Injector Orifice Plate 32# Customized Items

No.	1	2
Image		
Name	Injector Orifice Plate's Front Lettering	Injector Orifice Plate's Side Lettering
Description	Orifice plate part number: <b>32#</b>	/
No.	3	4

**(3) RF7J 13 H501 Injector Orifice Plate 32# Customized Service Requirements:**

Custom lettering of injector orifice plate are not less than **100 pieces**.

Custom packing boxes of injector orifice plate are not less than **100 pieces**.

The purchase of injector orifice plates are not less than **100 pieces**.

When customized products involve the need of specific logo, the OEM manufacturer has to provide trademark authorization and the sample of logo image file.

**▲ Once the customized RF7J 13 H501 injector orifice plate 32# is sold, it cannot be returned or exchanged if there is no quality problems.**

**1.6.RF7J 13 H501 Injector Orifice Plate 32# Packing List**

**(1) RF7J 13 H501 Injector Orifice Plate 32# Spare Parts List**

### 1.9.RF7J 13 H501 Injector Orifice Plate 32# Thickness Measurement Methods

#### (1) Electronic Vernier Caliper

1. Preparation: Clean all surfaces of the caliper with a dry soft cloth, please make sure there is a battery in the caliper before using it;
2. Press the OFF/ON button on the vernier caliper to turn on the caliper;
3. When you turn on the vernier caliper, sometimes there is data on the screen. This is because the caliper is not fully closed. You can roll the caliper with fingers to close it, and then press the ZERO button to return to zero;
4. Put the orifice plate into the caliper and press it tightly by rolling the button;
5. After tightening, use the other hand to tighten the upper button of the caliper to prevent looseness from affecting the accuracy of the reading. Last read the data.

Pic No.1

**▲ Notice:** When using the electronic vernier caliper, be sure to return on zero port, otherwise there will be a large error in the measurement results!

## (2) Electronic Digital Display Micrometer

1. Preparation: Clean all surfaces of the caliper with a dry soft cloth, please make sure there is a battery in the caliper before using it;

2. Use of ON/OFF ZERO function key:

In the "off" state, short press the ON/OFF ZERO function key to start up, the micrometer is in the metric reading (shown on the right of the display "mm") mode and display the set value. If there is no set value, the initial value is displayed as "0".

In the power-on state, press and hold (more than 2 seconds) the ON/OFF ZERO function key to shut down.

In the power-on state, short press the ON/OFF ZERO function key, and the display returns to the set value or the initial value "0".

3. Use of "mm" function keys:

In the power-on state, short press the "mm" function key to realize the conversion of metric ("mm" is displayed on the right side of the display) and inch ("in" is displayed on the right side of the display) display mode.

In the power-on state, press and hold (more than 2 seconds) the "mm" function key to enter the setting value mode;

### Setting of set value:

Long press (more than 2 seconds) the "mm" key to make the first character flash, and short press the ON/OFF ZERO key to select any number from 0 to 9;

Short press the "mm" key, and jump to the next character to flash, use the same method to select all the characters, press and hold (more than 2 seconds) the "mm" key to complete the preset value, then the character will no longer flash;

Once the setting value is set, it will last until the battery is removed or the battery is exhausted.

4. Data Transfer Method:

Open the data output port cover, insert the data acquisition line (need to be purchased separately) into the outer micrometer, and connect the other end to the company's data acquisition adapter (need to be purchased separately) or connect to the computer.

Pic No.2

**1.10. RF7J 13 H501 Injector Orifice Plate 32# Warranty Instructions**

**(1) . RF7J 13 H501 Injector Orifice Plate 32# Warranty Conditions and Instructions**

It is necessary to provide the pictures, videos of RF7J 13 H501 injector orifice plate 32# when the injector orifice plate is abnormal during use or the test report of RF7J 13 H501 injector orifice plate 32# inspection equipment as evidence to feedback to the salesman.

Abnormal conditions are properly explained such as : 1.Black smoke, 2. Engine shake, 3. Difficulty starting the engine, 4. Engine noise, 5. Oil leakage etc.

The above conditions may also be affected by incorrect installation of the fuel injector. If it is confirmed that it is product problem after being tested by our company, the injector orifice plate is within the scope of warranty.

**(2) . RF7J 13 H501 Injector Orifice Plate 32# Warranty Coverage**

After customer receives the RF7J 13 H501 injector orifice plate 32# within 15 days , customer can choose to replace it if there is a performance failure and the product has no appearance damage;

If the RF7J 13 H501 injector orifice plate 32# has performance problems during the warranty period (3 months), and it is confirmed to be product' s problems after being tested, you can contact our salesmen to replace the same model or a reworked product with the same performance for free;

If the injector orifice plate is confirmed to be fault-free, it can only be repaired and it will be returned as original way.

**(3) . RF7J 13 H501 Injector Orifice Plate 32# Out of Warranty Coverage**

The RF7J 13 H501 injector orifice plate 32# is artificially damaged due to assembly errors during the process of assembling.

The warranty period has expired.

RF7J 13 H501 injector orifice plate 32# failure caused by high temperature, high pressure, humidity, rain and snow, saline-alkali land, earthquake, and used in abnormal environment.

RF7J 13 H501 injector orifice plate 32# damage caused by man-made reasons (throwing, strong magnetic field magnetization, set fire).

RF7J 13 H501 injector orifice plate 32# failure or injector damage caused by non-injector orifice plate's design, technology, manufacturing, quality and other issues.

IRF7J 13 H501 injector orifice plate 32# failure due to system pressure exceeding system approved pressure.

RF7J 13 H501 injector orifice plate 32# failure caused by impurities (water, lead, aluminum powder, iron powder, sulfide) in the system fuel exceeding the standard requirements.

RF7J 13 H501 injector orifice plate 32# failure caused by not installing according to the tightening torque specified in the vehicle engine maintenance manual (the tightening torque is too large or too small).

RF7J 13 H501 injector orifice plate 32# failure caused by not following the installation angle specified in the vehicle engine maintenance manual.

RF7J 13 H501 injector orifice plate 32# failure caused by not following the cleaning requirements specified in the vehicle engine maintenance manual.

RF7J 13 H501 injector orifice plate 32# failure caused by failure to replace consumable parts as specified in the vehicle engine maintenance manual.

**1.11.RF7J 13 H501 Injector Orifice Plate 32# Manufacturer**

**Manufacturer:** Shenzhen Shumatt Technology Co., Ltd

**2. RF7J 13 H501 Injector Orifice Plate 32# Technical Support**

**2.1.RF7J 13 H501 Injector Orifice Plate 32# Inspection and Semi Ball Inspection**

- (1) Magnify 500 times under the microscope to check whether there is indentation on the sealing surface and the oil outlet hole of the orifice plate, check whether there is wear, scratch, damage, rust, depression, semicircle in the center hole of the orifice plate.

<p>Orifice plate center deviation inspection</p>	<p>There is indentation on the side, the orifice plate needs to be replaced</p>
<p>There is indentation in the middle oil back-flow hole, the orifice plate needs to be replaced</p>	<p>The middle oil back-flow hole is semicircular, the orifice plate needs to be replaced</p>

- ▲ The blockage of the oil back-flow hole will cause small volume of the oil return, and the oil will not be injected.
  - ▲ When oil back-flow hole becomes larger, it causes the semi ball to be not tightly sealed, which causes the fuel injection pressure cannot be established, then the fuel injector cannot work normally.
  - ▲ The wear on orifice plate's surface causes gap to the semi ball, which leads to large volume of oil return, in serious cases, the pressure can not be built up and nozzle will spray oil directly.
  - ▲ The blockage of the oil inlet hole (side hole) will cause small amount of oil return, the blockage of oil inlet side hole will cause the injector cannot build a pressure chamber, as a result, the injector cannot work normally.
- (2) Magnified 500 times under the microscope, check the plane position of the semi ball, if there is any scratch, it is recommended to replace it.

	
<p>Semi ball's surface inspection</p>	<p>Semi ball's surface inspection</p>

**2.2.RF7J 13 H501 Injector Orifice Plate 32# Level of Damage Inspection**

**(1) Slight Damaged**

	
<p>Wear marks on edge</p>	<p>The misalignment of the semi ball causes damage to the orifice plate when installing it</p>
	<p>/</p>
<p>The wear of the middle oil back-flow hole causes gap between semi ball and orifice plate, and causes the orifice plate to be washed out by high-pressure oil</p>	<p>/</p>

(2) Moderate Damaged

	
<p>Wear marks on edge</p>	<p>The misalignment of the semi ball causes damage to the orifice plate when installing it</p>
	<p>/</p>
<p>The wear of the middle oil back-flow hole causes gap between semi ball and orifice plate, and causes the orifice plate to be washed out by high-pressure oil</p>	<p>/</p>

(3) Highly Damaged

	
<p>Obvious Wear marks on edge</p>	<p>The misalignment of the semi ball causes damage to the orifice plate when installing it</p>

The wear of the middle oil back-flow hole causes gap between semi ball and orifice plate, and causes the orifice plate to be washed out by high-pressure oil

(4) More Pictures of Orifice Plate's Damage Details

The misalignment of the semi ball

Marks of the misalignment of the semi ball

The indentation of the misalignment of the semi ball

Washout marks caused by the presence of impurities in the fuel

Washout marks caused by the presence of impurities in the fuel	The front of oil outlet
Water in fuel causes to rusting	Water in fuel causes to rusting

## (5) Impact Classification According to The Degree of Damage to The Orifice Plate

Damage Type	Severe Damaged	General Damaged	Slight Damaged
Classification	A	B	C
Impact on Overall Performance	Cause the fuel injector to not work properly, damage the vehicle engine or cause serious loss	Cause the injector cannot work normally, the vehicle cannot start normally, and the vehicle stop working	Cause Excessive oil return of injector and the vehicle engine shaking
Impact on Features	Affect the normal operation of the engine	Affect the normal operation of the injector	Affect the fuel injection volume of the injector
Impact on Safety of Use	Cause serious damage to the engine and cause safety accident	Cause serious damage to the injector and may cause safety accident	Cause serious damage to the injectors and the vehicle stop working

**2.3.RF7J 13 H501 Injector Orifice Plate 32# Installation Steps**

- Before install RF7J 13 H501 injector orifice plate 32#, clean it in an ultrasonic cleaning machine for 3-5 minutes so that to make the dirt, anti-rust oil oxide, paraffin base, naphthenic base, intermediate base, salt, lead naphthenate, zinc naphthenate, sodium petroleum sulfonate, barium petroleum sulfonate, calcium petroleum sulfonate, tallow diamine trioleate and rosin amine shedding fall off.

- (2) Use compressed air to clean up the cleaning fluid attached to the surface of the cleaned orifice plate to meet the use standard.
- (3) When installing the orifice plate, install it according to the oil hole A on the orifice plate, and match A, B, C on the orifice plate with A, B, C on the injector house. See as Pic No. 1

Pic No. 1

- (4) Put the orifice plate into the injector with the stabilizing pin inserted into the stabilizing hole, see as Pic No. 2

Pic No. 2

(5) Place the buffer lift measurement tool and dial gauge in the measuring tool (CRT220) at zero port for buffer stroke measurement, see as Pic No. 3

Pic No. 3

Buffer Stroke: When the solenoid valve is powered off, the spring force of the opened solenoid valve transfers to the center of the armature plate and drives the armature plate to go down. When the valve ball contacts the oil return hole in the center of the orifice plate, the oil back-flow hole is closed. However, the armature plate has to run down a certain distance under the inertia, and this distance is called the buffer stroke.

The normal range of the buffer stroke is 20-40 (um) microns.

(6) The measurement of buffer lift is in the normal range, within 20-40 (um) microns, see as Pic No. 4

Pic No. 4

▲ Notice: The buffer stroke is the distance between the plane A of the semi ball to the plane B of the lock nut. If it is lower than 20-40 (um) microns, grind the B plane to 20-40 (um) microns. If it is higher than 20-40 (um) microns, check worn parts and replace it.

Pic No. 5

(7) Install the air clearance lift measuring tool and dial gauge in the measuring tool (CRT220) and place it at zero port for air clearance measurement, see as Pic No. 6

Pic No. 6

▲ Air clearance measurement normal range value is 45-50 (um) microns.

(8) The measurement of air clearance is in the normal range, within 45-50 (um) microns, see as Pic No. 7

Pic No. 7

▲ Notice: The air gap is the distance between plane A and plane B at the top of the armature, if the gap is not within 45-50 (um) microns, please replace it.

Pic No. 8

(9) Install lock nut, see as Pic No. 9

Pic No. 9

(10) Install the (CRT230) 3-jaw tool inside the CRT029 on the lock nut, see as Pic No.10

Pic No.10

(11) Rotate (CRT084) clockwise with a torque wrench to tighten the lock nut to 70-75Nm, see as Pic No.11

Pic No.11

(12) When installing the semi ball, it should be noted that the plane of the semi ball cannot be reversed, otherwise it may cause damage to the orifice plate, see as Pic No.12

Pic No.12

(13) place the semi ball on the armature, Pic No.13

Pic No.13

(14) Put the armature with semi ball into the lock nut (**Make sure that the armature buffer stroke and armature air clearance lift are within the normal range**), see as Pic No.14

Pic No.14

(15) Measure the thickness of the armature lift adjustment gasket, see as Pic No.15

Pic No.15

(16) Put the armature lift adjustment gasket into the solenoid valve, see as Pic No.16

Pic No.16

(17) Install the armature stroke measuring tool and dial gauge in the measuring tool (CRT220) and place it on zero to measure armature travel, see as Pic No.17

Pic No.17

The stroke of the armature also controls the final lifting position of the semi ball. The greater the stroke of the armature is lifted, the longer it will take for the return oil to rush in the orifice plate, which will cause the orifice plate to fail in a short time and the injector to fail to work normally. However, the stroke of the armature should not be too small, otherwise it will cause insufficient fuel injection, resulting in problems such as reduced engine power and engine shaking.

(18) The measurement of the solenoid valve's lift of the armature is 3.413, see as Pic No.18

Pic No.18

(19) Measure the armature travel of the injector housing end again, see as Pic No.19

Pic No.19

(20) Subtract the two data measured in step 17 and step 18 to get the normal range value of armature stroke between 60-65um. If the value is too large or too small, replace the armature lift according to the measurement results and adjust the thickness of the shim to make the armature stroke range reach the normal range, see as Pic No.20

Pic No.20

(21) Put the solenoid valve spring adjustment shim into the solenoid valve, see as Pic No.21

Pic No.21

(22) Put the solenoid valve spring into the solenoid valve, see as Pic No.22

Pic No.22

(23) Install the solenoid valve sealing ring on the fuel injector, see as Pic No.23

Pic No.23

(24) Install the solenoid valve on the fuel injector, If the solenoid valve is not replaced, install it according to

the red mark. If there is a replacement solenoid valve, install it according to the standard angle which checked on Truck book Parts EPC APP, see as Pic No.24

Pic No.24

(25) Tighten the solenoid valve clockwise with a torque wrench (CRT084) to 25-35Nm, see as Pic No.25

Pic No.25

(a) Leak Test

Test Result:

1. The oil return is not sealed: there is no seal between the orifice plate and the semi ball.

May Lead To:

Oil return volume increased, oil leakage when the nozzle is in an open state, pressure cannot be established, and the injector fail to work, etc.

Solution:

Check or replace the orifice plate and Semi ball.

(b) VL Test

Test Result:

1. The maximum fuel injection volume is too large;
2. The maximum fuel injection volume is too small.

May Lead To:

1. The maximum fuel injection volume too large will cause the exhaust gas smoke and the fuel consumption will be high;
2. The maximum fuel injection volume too small will cause the engine powerlessness and delayed acceleration.

Solution:

1. When the maximum fuel injection volume is too large, make the armature stroke adjustment gasket or the solenoid valve spring adjustment gasket thin, and fine-tune the nozzle lift adjustment gasket;
2. When the maximum fuel injection volume is too small, make the armature stroke adjustment gasket or the solenoid valve spring adjustment gasket thick, and fine-tune the nozzle lift adjustment gasket.

## 2.4.RF7J 13 H501 Injector Orifice Plate 32# Technical Support Obtaining Methods

(1) RF7J 13 H501 Injector Orifice Plate 32# Technical File, visit <http://shumatt.com> to get the technical file.

(2) **Injector Technical Videos**

**Facebook:** Visit <https://www.facebook.com/hison.li> to get the technical videos, constantly follow can get more information.

**YouTube:** [https://www.youtube.com/channel/UCByvYBx7VjV\\_mAfxh\\_Hu-aw](https://www.youtube.com/channel/UCByvYBx7VjV_mAfxh_Hu-aw) to get the technical videos, constantly follow can get more information.

**Shumatt:** Visit <http://shumatt.com> to get the technical videos.

(3) Injector Information Query Software

TruckBook Parts EPC APP, Android/Apple App Store download and install, visit <http://shumatt.com> to get the download and installation tutorial

## 3.RF7J 13 H501 Injector Orifice Plate 32# Purchase and Delivery

### 3.1.RF7J 13 H501 Injector Orifice Plate 32# Purchase Payment Methods

**Payment methods:** T/T, PayPal, Alipay, WeChat

▲ **Please contact our salesmen for specific payment information.**

### 3.2.RF7J 13 H501 Injector Orifice Plate 32# Main Sales Markets

---

Injector orifice plate's main sales markets: Asia, Europe, North America, South America, Africa etc.

**3.3.RF7J 13 H501 Injector Orifice Plate 32# Declaration Requirements**

Shumatt can assist customers to provide the following documents for import customs clearance: contract, invoice, packing list, bill of lading, insurance policy, certificate of origin, etc.

**3.4.RF7J 13 H501 Injector Orifice Plate 32# Shipping Ways**

**Destination in China areas:** SF Express, Debon Express, the corresponding logistics company can be provided according to customer requirements in special cases.

**Destinations out of China's areas:** DHL, UPS, FedEx, TNT air, ocean or other shipping methods required by customers.

**3.5.RF7J 13 H501 Injector Orifice Plate 32# Lead time**

**Lead time:** Send out within 3 – 7 working days after receiving payment ( Except for special products and special cases ) .

**3.6.RF7J 13 H501 Injector Orifice Plate 32# Logistics Time for Destination Out of China's Areas**

**DHL Logistics Time :**

Country or Region of Departure	Hong Kong, China	Other Countries or Regions of Asia	Australia and New Zealand	Europe	America	Other Countries
China's Mainland	7 Days	7 Days	8 Days	8 Days	8-12 Days	7-10 Days

**UPS Logistics Time: Country or Region of Departure: China's Mainland**

Country of Destination	Estimated Arrival Time	Country of Destination	Estimated Arrival Time	Country of Destination	Estimated Arrival Time
Japan	3 Days	UK	5-7Days	Egypt	5-7 Days
Turkey	5-7 Days	Singapore	3 Days	Switzerland	5-7 Days
Bahrain	5-7 Days	Latvia	7-10 Days	New Zealand	7-10 Days

**Pallet Shipping:** Use pallet that meet export requirements, and use white wrapping protective film to wrap and bind with cable ties

#### 4.RF7J 13 H501 Injector Orifice Plate 32# Storage Standard

- (1) Choose a suitable storage place

The warehouse and cargo yard where RF7J 13 H501 injector orifice plate 32# is stored should be kept clean and dry, and away from the factory buildings that generate harmful gases and dust; do not mix with acid, alkali, salt and other substances; the storage place should have a good drainage system; the cargo yard should be flattened with gravel or furnace ash etc. to enhance the water permeability of the surface layer to keep the reservoir area dry.

#### (2) Strict requirements of warehousing

Strict inspections should be carried out when RF7J 13 H501 injector orifice plate 32# are put into storage, the surface cleaning work should be done well to remove water traces, oil stains, ash and other dirt, remove the rust and do anti-rust treatment in time. Packaged injectors must be protected from damage.

#### (3) Keep the warehouse dry and preventing moisture

The relative humidity is usually below 70% for RF7J 13 H501 injector orifice plate 32# placed in the room, and the corrosion of the injector orifice plate is significantly reduced.

Injector orifice plates must be stored in the warehouse, and they are forbidden to store in the same warehouse with commodities with high water content.

#### (4) Stack Properly

After RF7J 13 H501 injector orifice plate 32# is exposed to rain, the corrosion rate will increase significantly. The purpose of sealing is to isolate the injector orifice plate from rainwater and humid air, so the warehouse window should be checked in time to avoid rainwater entering the warehouse

If the RF7J 13 H501 injector orifice plate 32# package is damaged, it should be repaired or replaced; when the package is damp, the packaging material should be dried; if the original anti-corrosion and oil applied at the factory is found to be damaged or dried up, it should be cleaned and re-applied oil in time.

- ▲ It is forbidden to leave RF7J 13 H501 injector orifice plate 32# exposed in the air for a long time.
- ▲ It is forbidden to store acid, alkali, salt and other substances together with RF7J 13 H501 injector orifice plate 32#.
- ▲ The unpacked RF7J 13 H501 injector orifice plate 32# must be rust-proof during secondary storage.
